

Corporate Overview Qualifications & Experience

Environmental Risk Communications, Inc. (ERCI) is an expert and industry leading consultancy in the area of environmental liabilities management and the developer of targeted software solutions for the environmental industry. The company was founded in 1994 and specializes in servicing clients with complex environmental restoration and remediation projects. We offer our proprietary Sarbanes-Oxley compliant software applications for creating detailed financial analyses and documentation of environmental liabilities. The software suite leverages Monte Carlo simulation, discounted cash flow analysis, decision analysis and sensitivity analysis to provide probabilistic cost estimating and reserve forecasting. ERCI's suite of applications enables corporate environmental project managers to reach strategic decisions (e.g., select fastest technology, lease out property during cleanup, use risk-based corrective action cleanup standards) that reflect the current understanding of project risks and the value of additional information.

To complement our software solutions, we support our clients with consulting services to develop site-specific strategic cleanup plans, as well as financial solutions, to determine the optimal management alternatives for both individual sites and portfolios of environmental liabilities. We assist clients in both the public and private sectors with strategy selection for environmental remediation projects, brownfield redevelopment, and the estimation and documentation of environmental reserves. Our clients include companies in the chemical, petroleum and heavy manufacturing industries, as well as government entities such as port authorities and airports.

The culmination of our experience, proprietary software tools and skill sets results in our ability to effectively accomplish our corporate mission:

“To help our clients efficiently and effectively manage their environmental liabilities while balancing business & accounting requirements with environmental stewardship interests”

ERCI's team of professionals includes financial analysts, accountants and engineers / scientists with advanced degrees and extensive project experience related to assessment and management of environmental reserves, liabilities and related risks. This team helps our clients apply financial rigor in evaluating various strategic options for their respective remediation projects.

To ensure that your organization is compliant with all appropriate financial reporting requirements, please contact your ERCI consultant today and request a proposal for ERCI's services.
